

Bad CRM data has a price. Here is the number.

Estimated annual cost of poor data quality

\$6,444

What this is

A full data quality audit run on your own CRM export. Duplicate records resolved by entity, empty fields recovered, forgotten leads separated from dead ones, and email addresses checked against live DNS.

What this is not

Nothing was deleted. Your CRM was never connected. Every merge is a proposal with the score that justified it, and you decide what gets applied.

DUPLICATES

16.8%

Currency USD · cost per loaded sales rep \$50/h · average ticket \$25,000

Exchange rate 1.0 as of 2026-10-04 · every assumption is editable: change one and the number moves

THE BREAKDOWN

Where the number comes from

Three separate costs, each with the assumption that produces it. Disagree with an assumption and we change it.

Rep hours on dedupe and lookups 49 recoverable hours x \$50/h	\$2,458
Revenue sitting in forgotten leads 7 leads x 2% close rate	\$3,500
Bounced sends and sender reputation invalid addresses damage your sending reputation beyond the bounce itself	\$486
TOTAL ANNUAL COST	\$6,444

ON EMAIL HYGIENE

39 of your addresses (10.9%) do not resolve or are disposable. That is not a formatting problem: those addresses will never receive anything, and sending to them is what gets a domain's reputation damaged. Every invalid one is listed in the audit file with the reason it failed.

WHAT I WOULD DO WITH IT

Recovered fields are the cheapest win: they are already sitting in duplicate records you are about to delete. Invalid emails come next, before any outbound campaign runs on them. The stale list last, because reactivating cold leads is a sales decision, not a data decision.

What I would merge, and why

Every merge below ships with the evidence that justified it. Nothing here was applied to your CRM.

RESOLVED BY EXACT MATCH		84 pairs	
Michael Smith	->	Michael Smith	
John Lopez	->	John Lopez	+2 fields
Carlos Garcia	->	Carlos Garcia	+2 fields
Luis Martinez	->	Luis Martinez	+4 fields
John Lopez	->	John Lopez	
John Lopez	->	John Lopez	
Michael Hernandez	->	Michael Hernandez	
... and 77 more, all in the JSON			

NEEDS A HUMAN DECISION		84 records
These look similar but I did not merge them. Two people can share a surname and a company, and a wrong merge deletes a real contact. Each one has its score and the signal that matched.		
Lisa Sanchez	~ Michael Smith	40 mismo email, nombres distintos (mi
Lisa Sanchez	~ Michael Smith	40 mismo email, nombres distintos (mi
Lisa Sanchez	~ Lisa Sanchez	100
Diego O'Brien	~ Andres Taylor	40 mismo email, nombres distintos (an
Ana Nunez	~ James Johnson	36 mismo email, nombres distintos (ja
Diego Brown	~ James Johnson	25 mismo email, nombres distintos (ja
.... and 78 more in the JSON		

You keep this report either way.

Take it to whoever owns the number. If the number is worth more than the work, you already know what to do with it.

Cleanup sprint

The audit plus the actual work: deduplication, normalization, enrichment, and a merge plan you approve before anything is applied. Scoped and fixed price.

\$12,000

Ongoing hygiene

The same audit every month so quality does not drift back. Cancel any month.

\$5,000/mo

Agency / white-label

You keep the client and the margin; I deliver under your brand. From \$750 per sprint.

from \$750

QUESTIONS I EXPECT

Is my data safe?

I never connect to your CRM. You send a CSV, I work on that file, and it is deleted on request after this report.

Why did you not merge the similar records?

Because two people can share a surname and a company. A wrong merge deletes a real contact, and you would find out after I

Is the number exact?

The counts are exact: they come from your file. The dollar figures are a model on the assumptions listed in this report. Change an assumption and the number moves.
